

Protect business connectivity with Secure Network

What is Secure Network?

An enterprise-grade networking platform that maintains a reliable, fast, secure network while protecting the data traveling on it.

Reliable, high-speed networking with comprehensive security or data privacy

Always-on protection with redundant links, spare failovers and self-healing technology

Seamless updates for threat definitions protect the network from the latest vulnerabilities and rogue websites

Multiple layers of defences at the edge and within the network, such as a firewall and intrusion prevention technology

Succeed with secure networks.

Cisco Secure Network simplifies networking, so your team can focus on the business.

The Secure Network advantage

Unified threat management protects business, customer data

Full visibility of the network, from clients to bandwidth and app usage

Software-defined WAN features optimize bandwidth use

AutoVPN connections for branches in 3 clicks

Get it now.

Cloud-based networking and security, plus Wi-Fi.

Simpler, more powerful managed secure networking with Wi-Fi as an add-on.

Ricoh Smart Connectivity

As a leading Cisco Gold Partner Ricoh will engage with companies in Australia to help them become more efficient in how they connect, manage, secure and share their data. Do more than keep up with the latest technology.
